

Guidelines For Estimating **Beef Cow-Calf Production Costs**Based on a 150 Head Cow Herd - Hay Ration

Date: September, 2023

This guide is designed to provide you with planning information and a format for calculating costs of production of a cow calf enterprise in Manitoba. General Manitoba Agriculture recommendations are assumed in using feed and veterinary inputs. These figures provide an economic evaluation of the livestock and estimated prices required to cover all costs. Costs include labour, investment and depreciation, but do not include management costs, nor do they necessarily represent the average cost of production in Manitoba.

These budgets may be adjusted by putting in your own figures. As a producer you are encouraged to calculate your own costs of production. Good management is assumed in that a balanced ration is being fed, livestock are on a herd health program and handling facilities are included.

This tool is available as an Excel worksheet at:

<u>The Farm Machinery Custom and Rental Rate Guide</u> is also available to help determine machinery costs.

Winter feed is a significant cost for cow calf production. A balanced ration to minimize cost per head per day is an important step in Risk Management Planning.

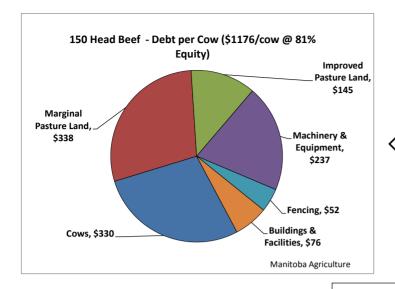

Herd replacement / breeding and summer pasture are the most significant other cow calf production costs.

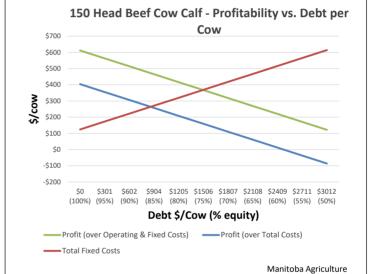

Knowing your total overwinter, winter feed and yardage costs are important in making pasture and extended grazing decisions or determining fair custom feeding rates and are an important step in Risk Management Planning.

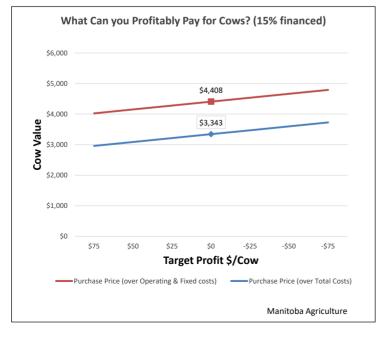

Manitoba Agriculture

Managing total debt per cow is a important step to maintain profitability in a cow calf production enterprise. Total P & I Cost = \$191/cow.

Cow calf profitability is significantly affected by both operating and fixed production costs.

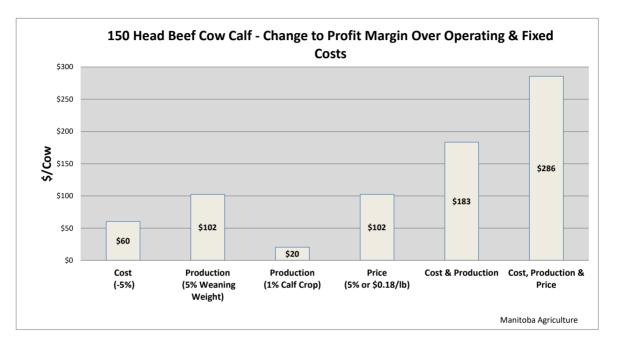

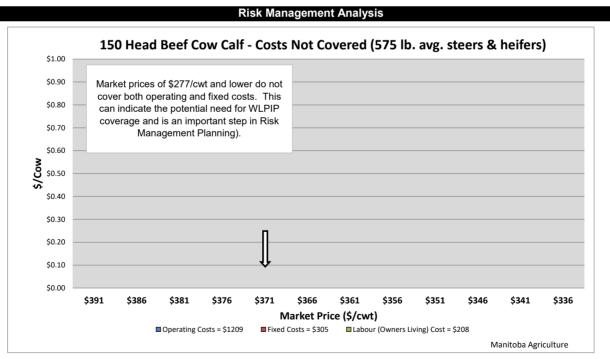

Knowing what you can pay for replacements to maintain your target profitability is an important step in managing beef cow enterprises.

Risk & Sensitivity Analysis (Stress Test)

Cow-Calf Production Costs - Herd Input

Assumptions

- 1. This budget outlines the cost of production for a cow-calf operation.
- 2. Buildings and equipment are valued at new cost.
- 3. All feed is purchased.
- 4. Manure removal is contracted out.
- 5. Replacement heifers are valued at fair market value
- 6. This budget assumes an average weaning weight of 575 lbs. (steer calves 600 lbs and heifer calves 550 lbs.)

Cow-Calf Production Costs - Herd Profile						
	<u>Total</u>					
Number of Cows	150 head					
Average Cow Weight	1,350 lbs					
Number of Bulls	5 bulls					
Calf Crop	95 %					
Steer Calf Weight	600 lbs					
Steer Calf Market Price	\$380 /cwt					
Heifer Calf Weight	550 lbs					
Heifer Calf Market Price	\$330 /cwt					
Average Calf Weight	575 lbs					
Weighted Average Calf Market Price	\$356.09 /cwt					

Cow-Calf Production Costs - Herd Replacement

Herd Replacement (Cows)

Average Value/Cow \$2,200 (bred cow to steer calf price ratio = .96)

(bred cow to steer calf price ratio range is often 1.1 to 1.5 = estimated cow value range of \$2,508 to \$3,420)

Cull Cow Market Price \$130 /cwt
Cow Mortality Rate \$1.25 %

Herd Replacement (Cows)

Replacement Cost/Heifer \$3,500

Cull Cow Market Value - \$1,755.00

(1350lb cow / 100 x \$130/cwt cull price = \$1755.00)

Cow replacement rate (%) x 12.0

= \$209.40 /cow

Cow-Calf Production Costs - Breeding Breeding Costs Cost Per Cow Feed for Bulls Hay Good Quality (tons/yr) 4.00 Hay Price (\$/ton) 120 Χ Number of Bulls 5 Χ 150 \$16.00 cows = **Barley** Per Bull (lbs/day) 7.00 Days/Year on Barley Х 120 Pounds per bushel 48 Barley Price (\$/bu) \$6.00 Х Number of Bulls 5 Х 150 \$3.50 cows = = Total \$19.50

Winter Feed Summary										
	Total Days on Feed ¹	Average Cost/Day	Feed Cost per Cow ²							
Pre Calving - Cows	135	\$2.14	\$288.86							
Post Calving - Cows	60	\$3.32	\$199.19							
	195	\$2.50	\$488.05							

- 1. Total Days on Feed Must = 195 Days (as calculated on Input worksheet)
- 2. Feed Cost Per Cow Based on 1350 lb Cow

Note: The suggested feed rations above were formulated using Cowbytes Beef Ration Balancer software with no included allowance for wastage during feeding. Feed ration quantity and costs should be adjusted accordingly. If you need help with a ration, contact a Manitoba Agriculture Livestock Specialist.

Note: This budget is only a guide and is not intended as an in-depth study of the cost of production of this industry. Interpretation and utilization of this information is the responsibility of the user.

Assumptions

- 1. This budget outlines the cost of production for a cow-calf operation with 150 cows, 5 bulls and 95% calf crop weaned.
- 2. Building and equipment are valued at new cost.
- 3. Feed cost is a combined value of market price and on-farm production costs.
- 4. Manure removal is contracted out.
- 5. Replacement heifers are valued at fair market value.
- 6. This budget assumes an average weaning weight of 575 lbs. (steer calves 600 lbs and heifer calves 550 lbs.)

Capital and Debt Summary:

				6.61	992				

Profitability and Breakeven Analysis:

Gross Revenue = calf weight (lbs) x\$/lb x% calf crop (eg. 575 x\$3.56/lb x95% = \$1945.14)

Return on Investment (ROI) = (Gross Revenue - Total Cost) / Total Cost

(eg. (\$1,945.14 - \$1,721.76) / \$1721.76 = 13.0%

Return on Asset (ROA) = (Margin Over Operating - Owners Labour - Building Depreciation - Machinery Depreciation - Fence Depreciation) / ((Building, Machinery & Equipment Investment + Pasture Investment + Breeding Herd Investment) / Herd Size) (eg. (\$736.21 - \$208.00 - \$20.16 - \$94.64 - \$9.38) / ((\$284,335 + \$289,200 + \$352,500) / 150) = 6.5%

Operating Expense Ratio = (operating cost ÷ gross revenue) x 100

(eg. ($$1208.93 \div 1945.14) x 100 = 62%)

Breakeven Price \$/cwt = Cost ÷ % calf crop ÷ calf weight cwt (eg. \$1721.76 ÷ 95% ÷ 5.75 = \$315)

Cost Summary:

Summer Grazing Cost Per Cow Per Day = pasture cost ÷ days (eg. \$155.84 ÷ 135 = \$1.15)

Extended Grazing Cost Per Cow Per Day = grazing cost ÷ days (eg. \$41.65 ÷ 35 = \$1.19)

Winter Feed Cost Per Cow Per Day = feed cost ÷ days (eg. \$507.55 ÷ 195 = \$2.60)

Yardage Cost Per Cow Per Day = (\$72.33 straw + \$51.01 fuel & repair + \$6.75 building insurance + \$11.48 utilities + \$10.84 manure removal + \$20.16 building depreciation+ \$94.64 machinery depreciation + \$14.77 building investment + \$46.22 machinery investment + \$33.84 operating interest + \$4.21 misc. + \$130.00 labour) ÷ 230 days = \$2.151
