COVID-19 VACCINATION IN MANITOBA
TASK FORCE UPDATE

January 27, 2021
Safety First:

Our goal is to ensure the health care system and vulnerable populations have the maximum protection possible.

EXPERT ADVICE

- Public Health Agency of Canada, National Advisory Committee on Immunization (NACI), manufacturers – following guidance to provide first and second doses on the clinically-advised schedule.

- We also follow NACI guidance on priority populations.

VACCINE DELIVERY MODELS

- Preparing for large-scale deliveries once vaccine scarcity is addressed.
Based on most recent information available, Manitoba ranks third across the country for total population fully immunized.
COVID-19 VACCINATION IN MANITOBA
WEEKLY OPERATIONAL UPDATES
WORKFORCE RECRUITMENT

DAILY OPERATIONAL SCHEDULE

January 27, 2021

RBC CONVENTION CENTRE
859 Doses
48 STAFF (FTE)
25 Immunizers

KEYSTONE CENTRE
136 Doses
11 STAFF (FTE)
4 Immunizers

FIT TEAM - Winnipeg
314 Doses
12 STAFF (FTE)
12 Immunizers

CURRENT WORKFORCE

2007 STAFF (FTE)
As of Jan 25

156 ↑
this week

- 1059 immunizers
- 8 clinic managers
- 364 clinical leads
- 353 navigators
- 223 observers

Updated with Tuesday data
Six models of vaccination

1. **Pilot Site (Complete):** The first model, a pilot site at Rady HSC provided early experience with the vaccine and our effort.

2. **Supersites (Active):** In larger urban centres, supersites allow for rapid and large-scale vaccination, for increased speed, greater efficiency and reduced risk of waste and are designed scale up rapidly as vaccine supply arrives in Manitoba.

3. **Focused Immunization Teams (Active):** FITs visit facilities like personal care homes and other congregate living facilities to deliver vaccines where people live.

4. **First Nations (Active):** Manitoba allocates doses to First Nations partners to distribute and deliver in their communities.

5. **Immunization Hubs & Pop-up Sites (Future):** These sites will reach smaller population centres in rural and Northern areas across the province. *Limited launch, week of Feb. 8*

6. **Distributed Delivery (Future):** As vaccines become more available and distribution is stable, medical offices and pharmacies can begin to offer vaccine across the province.
SUPERSITES
In larger centres, supersites allow for rapid and large-scale vaccination for increased speed and efficiency.

VACCINE DELIVERY MODEL UPDATES
FOCUSED IMMUNIZATION TEAMS (FITs)
FITs visit facilities to deliver vaccines where people live.

- FITs will visit all remaining licensed personal care homes with about 4,834 residents this week.
- When done, they will have given first doses to residents at all licensed personal care homes in three weeks.
- Final stats and immunization rates will be available soon.

COVID-19 VACCINATION IN MANITOBA
PRIORITn POPULATIONS &
FOCUSED IMMUNIZATION TEAMS (FITs)
### NATION-WIDE GUIDANCE
- NACI makes recommendations for the use of vaccines currently or newly approved for use in humans in Canada, including the identification of groups at risk for vaccine-preventable diseases for whom vaccination should be targeted.
- NACI has released two stages of prioritization for COVID-19 to date.

### MANITOBA’S CONTEXT
- NACI recommendations leave room for local interpretation.
- Manitoba adapts based on the advice of the Vaccine Medical Advisory Table.
- Manitoba will accelerate vaccination of First Nations, given heightened risk.
- Currently evaluating the definition of “essential worker” through this process.

### SUPPLY-BASED PROGRESS
- Eligibility criteria set and appointments are booked based on these decisions.
- Advancing to the next group(s) of Manitobans is based on vaccine supplies and appointment demand.
Manitoba’s opening assumption was that the vaccine would be prioritized based on age, due to the impact of the virus and risk. Without further health or epidemiological evidence, we would have delivered vaccines to Manitobans from oldest to youngest.
STAGE 1
Determining these groups allows us to prepare for large-scale vaccine delivery once supplies are available.

To move from a purely age-based model, Manitoba follows NACI guidance.

NACI recommends that initial doses of authorized COVID-19 vaccine(s) should be offered to individuals without contraindications in the following populations:

- **Residents and staff of congregate living settings** that provide care for seniors.
- **Health care workers** (including all those who work in health care settings and personal support workers whose work involves direct contact with patients).
- **Adults in Indigenous communities** where infection can have disproportionate consequences.
- **Adults 70 years of age and older**, beginning with adults 80 years of age and older, then decreasing the age limit by 5-year increments to age 70 years as supply becomes available.
VACCINE PRIORITIZATION

• Based on NACI Stage 1, Manitoba’s public health leadership prioritized health care workers, personal care home residents and adults in remote First Nation or northern communities.
• This is the phase we are in now.
STAGE 2
Manitoba follows the recommendations of the National Advisory Committee on Immunization. Determining these groups now will allow us to prepare for large-scale vaccine delivery once vaccine scarcity is addressed.

NACI recommends that as additional COVID-19 vaccine supplies become available with enough supply to vaccinate key priority populations, COVID-19 vaccine(s) should be offered to individuals in the following populations:

- Health care workers not included in the initial rollout
- Residents and staff of all other congregate settings (e.g., migrant workers, correctional facilities, homeless shelters)
- Essential workers

Based on current information, this stage of immunization is expected to begin as early as April based on supply.

In the meantime, Manitoba will identify if or which roles or professions should be considered ‘essential workers’ – based on epidemiology and occupational health and safety evidence. Manitoba has also identified a higher risk for First Nations people and will accelerate their access to the vaccine.
VACCINE PRIORITIZATION – STAGE TWO

Priority Populations

Healthcare workers, PCH residents and adults in remote First Nation communities

FIT Prioritization

Oldest
90+ 80+ 70+ 60+ 50+ 40+ 30+ 18+

Youngest

• Other health care workers
• Residents and staff of all other congregate settings (e.g., supportive housing, assisted living, migrant workers, correctional facilities, homeless shelters)
Using the same evidence-based approach used to for personal care homes, Manitoba will assess the vulnerability of other congregate living sites and other populations to deploy FITs.

Facilities are prioritized based on:
- age of residents
- their health/cognitive needs
- facility set-up and ability to follow public health guidance
- income

FITs will be deployed to long-stay hospital patients and supportive housing facilities next, beginning the week of Feb. 1st.

The next priorities for FIT deployment will be corrections facilities and shelters and transitional housing.
The Manitoba government and First Nations will make a joint announcement about vaccine administration for First Nations people in the coming days.

As vaccines become more available and distribution is stable, medical offices and pharmacies can begin to offer vaccine across the province.

- There are currently three vaccines in development that could be suitable for distribution through doctors and pharmacists, if approved for use.

- While similar to Manitoba’s annual influenza campaign, a COVID-19 vaccine would still have more requirements, such as inventory management, real-time connection to the provincial immunization database and IT support to ensure patients get their second dose as set out by the manufacturer.

- Discussions are already underway with key stakeholder organizations (including colleges and professional associations) and more details will be provided soon.
This scenario estimates 70 per cent vaccine uptake among qualified Manitobans.

This scenario does not include any vaccines that have not yet been approved.

This timeline is dependent on vaccine supplies provided by the federal government and are based on supply projections as of Jan. 22.

The Manitoba government and First Nations will make a joint announcement about vaccine administration for First Nations people in the coming days.
This scenario estimates 70% vaccine uptake among qualified Manitobans.

This scenario includes 700,000 doses of currently unapproved product in Q3.

This timeline is dependent on vaccine supplies provided by the Federal Government and are based on supply projections as of January 22.

The Manitoba government and First Nations will make a joint announcement about vaccine administration for First Nations people in the coming days.

COVID-19 VACCINATION IN MANITOBA
INVENTORY AND PROJECTIONS
CONTINUED SUPPLY UNCERTAINTY IS LIMITING CONTINUED ROLL-OUT

- Canada has only provided information about shipments until the week of Feb. 1
- In the week of Feb. 1, Manitoba is receiving two trays of Pfizer, not the five initially expected.
- Updates on shipments (if any) for the week of Feb. 8 will be provided on Jan. 28. Manitoba’s projections will be updated accordingly.

Changes to scheduled appointments may be necessary based on what we learn about the shipment in the week of Feb. 8.
Based on current supply projections, we will average 1,270 injections per day in January, with a peak day of 2,196 doses.

In February, we estimate an average of 1,475 injections per day.

Projected as of January 19 and reflects supply reductions announced by Pfizer on January 15 and 19.
PFIZER DOSE INVENTORY

Projected for the next 30 days

If Manitoba receives no more Pfizer doses from the federal government, we will run out of this vaccine by Feb. 7.

Projections as of January 18, 2020. Each rise in doses represents a scheduled delivery.

NOTE: Manitoba follows the guidance of the National Advisory Committee on Immunization (NACI) and vaccine manufacturers to provide first and second doses on the clinically-advised schedule.
COVID-19 VACCINATION IN MANITOBA
UPCOMING EXPANSION
SUPERSITES
In larger centres, supersites allow for rapid and large-scale vaccination for increased speed and efficiency, if supply is available.

• In Phase Two, two additional supersites in the Interlake-Eastern and Southern Health – Sante Sud health regions will be ready to open their doors on Mar. 1. The opening day will depend on supply availability.

• Capacity in Winnipeg will also be considerably expanded by Mar. 1.

• In Phase Three, additional supersites in each health region will launch between April and July, once additional supply from the federal government becomes available.

• The determination of the exact location of the supersites will be made in consultation with the regional health authorities and communities over the coming weeks.

• Supersites will not act only as key points of administration, but also as points of distribution of supplies and vaccine to support the FITs and pop-up clinics in the surrounding areas.

• Detailed information regarding the exact locations of the supersites will be released shortly.
HUBS AND POP-UP SITES

These sites can reach smaller population centres in rural and Northern areas across the province, if supply is available.

MANITOBA'S FIRST POP-UP SITES WILL LAUNCH THE WEEK OF FEB. 8 TO IMMUNIZE ELIGIBLE HEALTH CARE PROVIDERS IN FLIN FLON AND THE PAS.

Eligible workers will be contacted by their employer and will not need to make an appointment.

This approach was developed in partnership with the health region, to complement the Thompson supersite launching Feb. 1, to respond to increasing COVID-19 rates and risk in the North.

Over the coming weeks, Manitoba will begin to mobilize pop-up sites in seven additional communities. This work – identifying a facility, recruiting and training staff and other logistics – will ensure we are ready as soon as we begin to receive supply.
COVID-19 VACCINATION IN MANITOBA

TASK FORCE UPDATE

January 27, 2021
