Preface to the 2005 Progress Report

This 2005 report on early childhood development (ECD) continues an annual series of reports to Manitobans on our province's progress and meets the Government of Manitoba's public reporting commitments under the September 2000 First Ministers' Early Childhood Development Agreement and the March 2003 Multilateral

Framework on Early Learning and Child Care. This report builds on Manitoba's 2002, 2003, and 2004 reports¹ by providing updates on ECD program activity (2004/05) and ECD investments (2005/06). Information from the 2003 report on the well-being of Manitoba's youngest children in 2000/01 is

updated and new information from 2002/03 is included. It also provides information on many indicators from 1998/99, 2000/01 and 2002/03. This gives a first look at trends in the early development of Manitoba's children, as well as trends in related family and community characteristics.

A FIRST LOOK AT TRENDS IN EARLY CHILDHOOD DEVELOPMENT IN MANITOBA 1998/99 TO 2002/03

INTRODUCTION:

A major highlight of this 2005 report is the information on indicators of children's well-being. For the first time since the original ECD progress report in 2002, data on young children and their families in both Manitoba and Canada are available for three points in time (1998/99, 2000/01, 2002/03). At least three data points are needed to describe a trend over time.

There appear to be some promising trends as well as ongoing and emerging challenges for both Manitoba and Canada. Future

ECD reports will provide provincial and national data for 2004/05 and 2006/07 and, in turn, a much better description of these trends.

Positive and Promising Trends

Provincial and national data suggest some positive and promising trends in ECD:

- fewer mothers smoking during pregnancy in both Manitoba and Canada
- fewer children born prematurely in both Manitoba and Canada

- continued low rates of low birthweight in both Manitoba and Canada
- higher breastfeeding rates in Manitoba than across Canada
- more positive parenting in both Manitoba and Canada
- more parents and children reading together in Manitoba, higher than Canada
- more parents attaining higher levels of education in Manitoba, closing the gap with Canada

- continued high rates of family functioning in both Manitoba and Canada
- continued high rates of neighbourhood safety and neighbourhood social cohesion in both Manitoba and Canada
- declining rates of children's hyperactivity and inattention problems in both Manitoba and Canada

Ongoing Challenges

Provincial and national data suggest some ongoing challenges in ECD:

- fewer children being born each year in both Manitoba and Canada
- higher number of children with high birthweights in Manitoba than in Canada
- higher rate of parental depression in Manitoba than in Canada
- higher number of children with delayed language development in Manitoba than in Canada

Emerging Challenges

Provincial and national data suggest some emerging challenges in ECD:

- rising rates of young children's emotional and anxiety problems in both Manitoba and Canada
- rising rates of young children's physical aggression and conduct problems in both Manitoba and Canada
- rising rates of poor prosocial development in young children in both Manitoba and Canada

Learning from Data and Moving Forward

As described in the Growing up in Manitoba section of this report, while the majority of Manitoba's nearly 80,000 children under age six were doing well (79% – 93%), significant percentages and numbers of Manitoba children were vulnerable in their physical, social, emotional, language and cognitive

development. These thousands of vulnerable children are growing up in every community and every kind of family across Manitoba. There is a need for effective, population-level approaches that reach and support as many children and families in the population as possible. In March 2005, the Government of Manitoba announced its commitment to implement a new population health approach to supporting parents and families of young children across Manitoba, the world-renowned, scientifically proven Triple P – Positive Parenting Program, beginning in 2006/07.²

¹ The 2002, 2003, and 2004 reports may be viewed on the Healthy Child Manitoba website at www.manitoba.ca/healthychild

² Additional information on Triple P is available on the Healthy Child Manitoba website at www.manitoba.ca/healthychild and will be provided in the forthcoming 2006 ECD progress report to Manitobans.

Overview of Manitoba's Investments in Early Childhood Development (ECD)

ECD Action Area	Total 2005/06 Investment (1000s)	New Investments since April 2000 (1000s)
Promoting Healthy Pregnancy, Birth and Infancy:		
Healthy Baby	\$4,845.4	\$4,845.4
BabyFirst (4)	0.0	
Families First (4)	\$9,031.9	\$5681.4
Stop FASD	\$748.4	\$346.6
Midwifery Program	\$3,400.0	\$3,400.0
Sub Total	\$18,025.7	\$14,273.4
Improving Parenting and Family Supports:		
Children's Special Services ^{(1),(2)}	\$18,481.4	\$8,812.6
National Child Benefit Supplement Restoration ⁽¹⁾	\$6,500.0	\$6,500.0
Sub Total	\$24,981.4	\$15,312.6
Strengthening Early Childhood Development, Learning and Care:		
Child Care ^{(1), (3), (6)}	\$78,818.7	\$27,803.0
Early Childhood Development Initiative	\$1,366.1	\$1,366.1
Early Start (4)	\$115.3	
Sub Total	\$80,300.1	\$29,169.1
Strengthening Community Supports:		
Parent-Child Centred Approach (2)	\$3,085.0	\$3,085.0
Injury Reduction Campaign ⁽¹⁾	\$230.1	\$230.1
Sub Total	\$3,315.1	\$3,315.1
Other ECD Initiatives⁽⁵⁾	\$2,489.5	\$2,199.1
TOTAL	\$129,111.8	\$64,269.3

(1) Includes some programming for children over the age of six years.

(2) Reflects internal transfer of Program function.

(3) Reflects funding in accordance with Five-Year Plan and does not reflect restructuring in accordance with Integrated Service Delivery (ISD).

(4) Reflects integration of the BabyFirst, Early Start and Integrated programs renamed as Families First

(5) Includes financial assistance to community organizations for ECD and ECD research and evaluation initiatives.

(6) Since April 2000, the Government of Manitoba increased investments in ECD by over \$64 million. Of this investment, Manitoba is pleased to acknowledge the federal government's contribution of \$18.2 million for ECD and \$8.2 million (under the 2003 ELCC agreement) and \$25.6 million (under the 2005 ELCC agreement) for Early Learning and Child Care (ELCC) in 2005/06.

EARLY CHILDHOOD DEVELOPMENT PROGRAMS: DESCRIPTIONS AND INDICATORS

DESCRIPTIVE INFORMATION

ECD PROGRAM NAME:	Healthy Baby Program (includes the Healthy Baby Manitoba Prenatal Benefit and Healthy Baby Community Support Programs)
LAUNCH DATE:	July 2001
TARGET POPULATION:	Manitoba Prenatal Benefit: Targeted (available to all pregnant women in Manitoba with net family incomes of less than \$32,000) Community Support Programs: Developed in targeted communities but universally open to all families in Manitoba through pregnancy and child's first year. Attendance is not restricted or targeted.
PROGRAM DESCRIPTION:	Healthy Baby is a two-part program that includes the Manitoba Prenatal Benefit and Healthy Baby Community Support Programs . The Manitoba Prenatal Benefit is a financial benefit to help low and moderate income women with the nutritional costs associated with pregnancy, modeled after the National Child Benefit (NCB). The benefit also acts as a mechanism to link women to community support programs. Healthy Baby Community Support Programs are designed to assist pregnant women and new parents in connecting with other parents, families and health professionals to encourage healthy outcomes for their babies. Community programs offer family support and informal learning opportunities via group sessions and outreach. Delivered through community-based partners, the programs provide families with practical information and resources on maternal/child health issues, the benefits of breastfeeding, healthy lifestyle choices, positive parenting, infant development and strategies to support the healthy physical, cognitive and emotional development of children. Community support programs are available in every region of Manitoba.

DESCRIPTIVE INFORMATION

ECD PROGRAM NAME:	BabyFirst Program
LAUNCH DATE:	April 1998 (three-year research sites: 1998-2000) April 1999 (province-wide implementation)
TARGET POPULATION:	BabyFirst includes universal screening of all live, off-reserve births, targeted assessments of at-risk families, targeted intensive home visiting for overburdened families, and universal referral to community resources and services.
PROGRAM DESCRIPTION:	<p>BabyFirst is a community-based home visiting program designed to support overburdened families who have children up to three years of age. Regular visits by public health nurses are augmented by weekly home visits from specially trained home visitors who establish trusting, nurturing relationships with families, support parenting and secure attachment, promote problem solving skills and assist in strengthening the families' support system.</p> <p>In December 2004, Healthy Child Manitoba began phasing out BabyFirst with the announcement of “Families First”, a community-based home visiting program for families and children from conception to kindergarten. This enhanced program was made possible through the integration of BabyFirst and Early Start (see next section). Full provincial implementation is scheduled for 2005-06.</p>
PROGRAM OBJECTIVES:	<ul style="list-style-type: none"> • To facilitate families’ abilities to ensure the physical health and safety of their children; • To enable parents to build on their strengths and to foster the development of a secure attachment with their children; • To support parents in their role of nurturing their children and providing appropriate social, physical, and cognitive stimulation for their children; and • To facilitate families’ connections with community resources and sense of belonging in their communities.
DELIVERY AGENT(S):	Public Health Nurses (supervision and coordination) and trained paraprofessional Home Visitors in all 11 Regional Health Authorities. Funding guidelines are in place and budgets were developed and negotiated with these organizations based on birth rates and estimated at risk populations.
LEAD OFFICE OR DEPARTMENT(S):	Healthy Child Manitoba Office – Healthy Child Committee of Cabinet

QUALITY:	<ul style="list-style-type: none"> • Introduced surveillance of alcohol use during pregnancy as part of the BabyFirst screening process. • Introduced BabyFirst Standards of Practice document. • Increase in public health nurse salaries related to collective agreement. • Introduced Growing Great Kids (GGK) Tier II Certification process. 	<ul style="list-style-type: none"> • Increased program capacity by hiring an additional 13 EFT Home Visitors and an additional 4.6 EFT PHNS to support supervision • Increase in Home Visitor salaries related to collective agreement • Increase in PHN salaries related to collective agreement • Trained a provincial trainer to deliver Parent Survey Training to PHNs • Hosted Home Visiting Conference in December 2004 • Integration of BabyFirst/Early Start into Families First to provide a continuum of support to families from conception to Kindergarten.

Promoting Healthy Pregnancy, Birth and Infancy

DESCRIPTIVE INFORMATION

ECD PROGRAM NAME:	BabyFirst/Early Start Integrated Model
LAUNCH DATE:	April 2002: Three regions were identified to pilot the Integrated Model (Central, Burntwood and North Assiniboine) to provide a regional continuum of home visiting services to families with children from birth to school entry. In 2004/05 the integrated program was expanded to South Assiniboine RHA, Parkland, North Eastman and the River East community of the Winnipeg Regional Health Authority. Consultations continued with plans to further integrate the program in all regions that had existing Early Start sites.
TARGET POPULATION:	Targeted: The Parent Survey is used as an assessment tool to identify eligible families based on referrals from Public Health and other community agencies.
PROGRAM DESCRIPTION:	<p>Expanded funding was used to pilot an integrated BabyFirst/Early Start home visiting model to provide a continuum of services for families. Three regional health authorities were involved in the initial pilot. Partnerships with child care facilities, school divisions, parent-child coalitions, and other community agencies provided local direction to these initiatives.</p> <ul style="list-style-type: none">• Accessing Families Home visiting services, formerly limited by strict criteria, are now available to eligible families with children aged 0-5. The existing BabyFirst universal screening and assessment process was maintained, and a referral process for older children was developed. Intake is coordinated through Public Health.• Amalgamating Services Home visiting services build on the strengths of both BabyFirst and Early Start. The screening and referral process, administration, and training and supervision of home visitors is coordinated through Public Health. All licensed child care facilities are able to refer eligible families, and participation in a quality child care program is an objective of the home visiting program.• Community Networking The service is community based with ongoing consultation to guide the implementation of the program. Community partnerships (BabyFirst, Early Start, Healthy Baby, Family Resource Centres, Child Care, etc) provide a continuum of services to families.• Consistent Training All home visitors are trained in the comprehensive Growing Great Kids (GGK) curriculum which provides a strong early childhood development focus to the service. Standard training, professional development, and networking opportunities are offered to all home visitors in the region.

DESCRIPTIVE INFORMATION

ECD PROGRAM NAME: **BabyFirst/Early Start Integrated Model**

PROGRAM DESCRIPTION: **• Integrating Supervision**
Supervision is delivered at the community level by Public Health Nurses, trained in child development, universal screening and assessment, quality assurance and strength based home visiting models.

In December 2004, Healthy Child Manitoba announced “Families First”, a community-based home visiting program for families and children from conception to kindergarten. This enhanced program was made possible through the integration of BabyFirst and Early Start. Full provincial implementation is scheduled for 2005-06.

PROGRAM OBJECTIVES:

- To facilitate families’ abilities to ensure the physical health and safety of their children;
- To enable parents to build on their strengths and to foster the development of a secure attachment with their children;
- To support parents in their role of nurturing their children and providing appropriate social, physical and cognitive stimulation for their children; and
- To facilitate families’ connections with community resources and a sense of belonging in their communities

DELIVERY AGENT(S): Public Health Nurses provide supervision and coordination; home visiting services offered through trained paraprofessionals.

Promoting Healthy Pregnancy, Birth and Infancy

DESCRIPTIVE INFORMATION

ECD PROGRAM NAME:	Early Childhood Health Promotion: <ul style="list-style-type: none">• Midwifery Program
LAUNCH DATE:	June 2000
TARGET POPULATION:	Midwifery care is available in six regional health authorities (RHAs) in Manitoba: Brandon, Burntwood, Central, NOR-MAN, South Eastman and Winnipeg. A provincial standard requires that 50 per cent of funded midwifery services be provided to populations who have greater difficulty accessing maternal/newborn care. These priority populations include: Aboriginal women, single women, adolescents, newcomers to Canada, and those with lower incomes, social isolation, or other risk factors.
PROGRAM DESCRIPTION:	Manitoba Health supports RHAs in providing midwifery services for families. Midwives provide primary care for women during pregnancy, labour, birth and for six weeks after birth; and for infants from birth to six weeks. Midwives are based in the community, often in community health clinics. They work collaboratively with other care providers and practitioners, provide birth services in hospitals and homes and refer women and newborns as needed to physicians, public health or other services. Midwifery care is wellness-based, focused on prevention and harm-reduction, and works to address the broad determinants of health.
PROGRAM OBJECTIVES:	<ul style="list-style-type: none">• to provide comprehensive primary care for women and their babies during pregnancy, labour, and birth through to approximately six weeks of age / postpartum.• to integrate midwifery into existing RHA programs• to provide services to identified priority populations; facilitating access and working to improve maternal/newborn outcomes.
DELIVERY AGENT(S):	Midwives employed by six RHAs and the Northern Medical Unit.

Improving Parenting and Family Supports

DESCRIPTIVE INFORMATION

ECD PROGRAM NAME:	Children's Special Services, Children's Programs
LAUNCH DATE:	April 1985
TARGET POPULATION:	The Children's Special Services Program is available to support families in caring for their children with developmental and/or physical disabilities in Manitoba
PROGRAM DESCRIPTION:	<ul style="list-style-type: none">• The Children's Special Services (CSS) Program is a non-statutory, voluntary program that provides assistance to natural, adoptive or extended families living with children who have developmental and/or physical disabilities throughout the province. Program staff provide service coordination, support and individualized services that address the unique needs and circumstances of eligible children and their families. Services are intended to support families and to reduce their stress so that out-of-home placement is prevented or delayed.• Family support services are individualized and family-centred. An example of support services may include respite, child development, supplies, assistive technology, home modifications and other supports.• The CSS Program also provides grant funding to external agencies to deliver specialized services such as therapy to children with disabilities and their families.• Children's Special Services works in partnership with other branches of Manitoba Family Services and Housing, other departments (including Manitoba Health/Healthy Living, Manitoba Education, Citizenship and Youth), the Healthy Child Manitoba Office, external agencies and community organizations in the delivery of services.
PROGRAM OBJECTIVES:	Children's Special Services (CSS) Program objectives are: <ul style="list-style-type: none">• to provide supports that enable families to maintain children with developmental and/or physical disabilities in their own homes to the greatest extent possible• to provide basic support to families to assist them to cover some of the extraordinary costs of caring for a child with disabilities• to partner with families and other providers in an approach that builds on family strengths and is guided by family priorities• to support families to ensure that their children with disabilities have access to activities and resources in inclusive communities

Improving Parenting and Family Supports

DESCRIPTIVE INFORMATION

ECD PROGRAM NAME:	National Child Benefit Supplement (NCBS) restoration for children ages 0 to 6 years
LAUNCH DATE:	April 1998
TARGET POPULATION:	Targeted: The National Child Benefit Supplement is available to low income families with children, as part of the National Child Benefit program.
PROGRAM DESCRIPTION:	<ul style="list-style-type: none">• The National Child Benefit Supplement (NCBS) was introduced in 1998 as an additional payment to low-income families with children, as part of the National Child Benefit (NCB) program. At the time it was introduced, Manitoba and most other provinces and territories agreed to recover it from families on social assistance.• In July 2000, Manitoba began restoring to families on Employment and Income Assistance the value of the NCBS by passing through the increase in the value of the NCBS to all children in the family regardless of age.• As of July 2001, the full amount of the NCBS was restored for children up to six years old whose parents were receiving income assistance benefits.• As of January 2003, Manitoba restored the full amount of the NCBS for children aged seven to 11 years; and as of January 2004, Manitoba restored the full amount of the NCBS for children aged 12 to 17 years.
PROGRAM OBJECTIVES:	<ul style="list-style-type: none">• to prevent and reduce child poverty• to promote labour force attachment of parents• to reduce overlap and duplication

Strengthening Early Childhood Development, Learning and Care

DESCRIPTIVE INFORMATION

ECD PROGRAM NAME: **Manitoba Child Care Program**

LAUNCH DATE: September 1974

TARGET POPULATION: Universal: The Manitoba Child Care Program is available to children ages 0 to 12 years in Manitoba.

PROGRAM DESCRIPTION: The Manitoba Child Care Program is responsible for:

- establishing licensing standards for child care centres and family child care homes under The Community Child Care Standards Act and licensing and monitoring facilities according to these standards
- providing financial assistance for child care fees on behalf of eligible parents with children attending child care facilities
- providing grants and program assistance to eligible community groups and individuals who provide child care services
- classifying all Early Childhood Educators and Child Care Assistants who work in child care centres in Manitoba
- providing competency based training to Child Care Assistants working in centres to enable them to achieve an Early Childhood Educator II classification

PROGRAM OBJECTIVES:

- to support sustainable, accessible, high quality child care
- to assist families participating in employment and training to find and maintain suitable child care
- to support parental participation in child care services
- to support inclusion of children with special needs in child care, including children with disabilities and children of families in crisis
- to review and adjust regulations, policies and systems to support continuous program development in the quality of services experienced by children, families, communities and providers

DELIVERY AGENT(S): Licensed child care facilities

LEAD OFFICE OR DEPARTMENT(S): Manitoba Family Services and Housing

¹ Source: Statistics Canada, Labour Force Survey. Does not include persons living on Indian Reserves or full-time members of the Canadian Armed Forces.

² Fees include daily non-subsidized fee.

³ Maximum fees apply to all funded spaces.

⁴ Centre revenue is made up of income from an operating grant and income from parent fees or fee subsidies on behalf of eligible families.

⁵ Regulation for training requirement effective January 2003.

⁶ Based on salary analysis of Early Childhood Educator IIs in funded full-time centres.

⁷ Research from the Childcare Resource and Research Unit at the University of Toronto's Centre for Urban and Community Studies, August 2002, suggests that child care services operated not-for-profit are more likely to deliver higher quality care environments.

⁸ Number of spaces currently funded and operating.

DESCRIPTIVE INFORMATION

ECD PROGRAM NAME:	Early Childhood Development Initiative (ECDI)
LAUNCH DATE:	April 2001
TARGET POPULATION:	Universal: ECDI is available to all Manitoba school divisions.
PROGRAM DESCRIPTION:	The Early Childhood Development Initiative helps school divisions to provide services for preschoolers up to five years old. These services focus on helping young children get ready for school. Human and financial resources are available to improve children’s readiness to learn and to strengthen schools’ partnerships with parents, communities and relevant support agencies. All of Manitoba’s school divisions are participating in this initiative of Manitoba Education, Citizenship and Youth.
PROGRAM OBJECTIVES:	<ul style="list-style-type: none"> • to improve children’s readiness for school • to strengthen school division partnerships with parents, communities and intersectoral agencies

DESCRIPTIVE INFORMATION

ECD PROGRAM NAME:	Early Start Program
LAUNCH DATE:	April 1998 (three-year research sites: 1998-2000) April 1999 (provincial implementation)
TARGET POPULATION:	Targeted: Early Start is available in selected sites to overburdened families with preschool children.
PROGRAM DESCRIPTION:	<p>The Early Start program is available in selected areas for families with preschool children, who need support to ensure healthy early childhood development. A three-year home visiting service provides parenting and literacy programs for these families and supports children's early physical, mental and emotional development. Expanded funding in 2002/03 was used for a pilot integrated BabyFirst / Early Start home visiting program, serving families from pregnancy to school entry. Further expansion to this model occurred in 2003-04, and 2004-05.</p> <p>In December 2004, Healthy Child Manitoba began phasing out Early Start with the announcement of "Families First", a community-based home visiting program for families with children from conception to Kindergarten. This enhanced program was made possible through the integration of BabyFirst and Early Start. Full provincial implementation is scheduled for 2005-06. (See BabyFirst/Early Start Integrated Model)</p>
PROGRAM OBJECTIVES:	<ul style="list-style-type: none">• To facilitate families' abilities to ensure the physical health and safety of their children;• To enable parents to build on their strengths and to foster the development of a secure attachment with their children;• To support parents in their role of nurturing their children and providing appropriate social, physical and cognitive stimulation for their children; and• To facilitate families' connections with community resources and a sense of belonging in their communities.
DELIVERY AGENT(S):	Trained paraprofessional home visitors based primarily in licensed child care facilities. In some communities, Early Start may be delivered through the Regional Health Authority or School Division.
LEAD OFFICE OR DEPARTMENT(S):	Healthy Child Manitoba Office – Healthy Child Committee of Cabinet

Strengthening Community Supports

DESCRIPTIVE INFORMATION

ECD PROGRAM NAME:	Early Childhood Health Promotion: <ul style="list-style-type: none">• Injury Prevention Initiative
LAUNCH DATE:	April 2000
TARGET POPULATION:	Universal: The Early Childhood Development component of the Injury Reduction Campaign was available province wide.
PROGRAM DESCRIPTION:	<ul style="list-style-type: none">• In April 2000 an Injury Reduction Campaign was created to reduce intentional and unintentional injuries to children. An injury prevention advertising campaign focusing on the prevention of childhood household injuries was implemented on March 26, 2001. Highlights from the last two years and upcoming events include the following.• In April 2002, Manitoba Health funded the Injury Prevention Centre of Children's Hospital in Winnipeg, Manitoba (IMPACT) to research a background discussion paper on injury prevention in Manitoba. The paper described the injury problem in Manitoba, provided a summary of Manitoba injury reports and began dialogue on the process towards developing an Injury Prevention Strategy.• In May 2002, the first intersectoral Injury Prevention Conference was held, with over 100 delegates, to begin the development of a Manitoba Injury Reduction Strategy.• Also in May 2002, an Interdepartmental Working Group was formed to share information, and to enhance collaboration on injury responses in the province.• In June 2002, Manitoba Health funded IMPACT to consult with injury stakeholders in all regions of the province on the recommendations made in the background development paper.• In March 2003, Manitoba Public Insurance and Manitoba Health launched a campaign to promote the use of child car seat restraints.• In June 2003, Manitoba Labour and Immigration and the Workers Compensation Board launched a province-wide Safe Work campaign to draw attention to the need to prevent workplace injuries and develop a culture of safety in Manitoba.• In March 2004, Manitoba Public Insurance and Manitoba Health provided an educational videotape to some health and education sites on the proper choice and installation of child car and booster seats.• In April 2004, the Economic Burden of Unintentional Injury in Manitoba was released. The study provides information on the cost of injury in Manitoba.• In April 2004, an updated Manitoba Injury Surveillance Report was released. The report provides injury data over a 10-year period and is an important planning document for the development of regional injury prevention plans.

DESCRIPTIVE INFORMATION

ECD PROGRAM NAME:	Early Childhood Health Promotion: <ul style="list-style-type: none">• Injury Prevention Initiative
PROGRAM DESCRIPTION:	<ul style="list-style-type: none">• In April 2004, a second Intersectoral Injury Conference was held to promote the development of province-wide injury prevention plans.• In June 2004, a Measuring Tape informational resource on child restraints and car seat safety to provide information regarding the different types of child passenger restraints was distributed to Manitoba school children. The resource emphasized the need for children between the ages of four and nine to use a booster seat and showed parents how to determine a child's readiness for a seat belt. 740 Manitoba schools received the resource, which was distributed to 41,200 kindergarten to grade 2 students.• In 2004, an RHA Injury Prevention Deliverable was created as part of ongoing accountability measures in the health planning process. RHAs are working to develop regional injury prevention plans which include intersectoral collaboration and plans to reduce injury in leading areas of death and hospitalization in each region.• In March 2005, Manitoba Healthy Living funded IMPACT to write Injury Prevention Best practice reports to assist RHAs and other injury prevention partners in planning injury reduction activities based on best practice evidence in four of Manitoba's leading causes of injury. These include: falls; motor vehicle injury; drowning; and suffocation/choking. The best practice documents were presented to RHAs and other stakeholders via Tele-health in March 2005.• In September 2005, an Interdepartment Injury Prevention Steering Committee and Injury Prevention Network were formed to develop a Provincial Injury Prevention Strategy.
PROGRAM OBJECTIVES:	<ul style="list-style-type: none">• to prevent and reduce unintentional and intentional injuries to children, youth and their families

Growing Up in MANITOBA: Early Childhood Development Indicators of Children's Well-being, 1998 to 2003

Introduction

In September 2000, First Ministers released the Early Childhood Development (ECD) Communiqué. As part of public reporting commitments, they agreed that provincial and territorial governments would “make regular public reports on outcome indicators of child well-being using an agreed upon set of common indicators to be developed by September 2002 related to the objectives established for early childhood development.”

The objectives established for early childhood development are:

- “To promote early childhood development so that, to their fullest potential, children will be physically and emotionally healthy, safe and secure, ready to learn and socially engaged and responsible” and
- “To help children reach their full potential and to help families support their children within strong communities.”

The ECD communiqué also specifies that the common set can include indicators that are currently available, as well as newly developed indicators.

Ministers also agreed on an approach to reporting indicators of young children's well-being. All jurisdictions, with the exception of Québec¹, agreed to report on a common set of indicators of young children's well-being and may also choose to report on additional child and environmental (family and community) outcomes.

Background and Description of Indicators

The following tables and graphs provide baseline information on children in Manitoba and Canada from 1998 to 2003. Data for these tables come from several sources, including the National Longitudinal Survey of Children and Youth (NLSCY), the Survey of Labour and Income Dynamics (SLID) and Canada Vital Statistics.

How young children are doing in Manitoba and Canada

An Update

In 1998/99, 2000/01 and 2002/03, the National Longitudinal Survey of Children and Youth (NLSCY) continued to collect information on Canadian children's development during pregnancy and the first five years of life. Information from the 2000/01 NLSCY Survey has been updated. The 2000/01 results in this report should be used instead of the 2000/01 results in the 2003 ECD report. The child behaviour/developmental scales have been updated using a common scale, different from that used before. Therefore, the results in this report replace those in previous reports.

This section provides information on the health and well-being of young children in Manitoba from 1998 to 2003. We will continue to build on current knowledge so that we can learn:

- what communities can do to make a difference
- which policies and programs improve outcomes for children
- how Manitoba's children are faring as they grow up

¹ The Government of Quebec has stated that, while sharing the same concerns on early childhood development, Québec does not adhere to the federal-provincial-territorial early childhood development initiative because sections of it infringe on its constitutional jurisdiction on social matters. Québec intends to preserve its sole responsibility for developing, planning, managing and delivering early childhood development programs.

The NLSCY does not sample children living in institutions or on First Nations reserves. The NLSCY does not always have representative information for the territories, which will affect the results for Canada.

Federal/provincial/territorial governments have agreed to report on the following indicators of early childhood development:

1. Physical health and motor development: the general state of the child's health and gross motor skills
2. Emotional health: the child's self-esteem, coping skills and overall emotional well-being
3. Social knowledge and competence: how children behave and how they are able to communicate feelings and wants
4. Cognitive learning: how children perceive, organize and analyze information in their social and physical environments
5. Language communication: the ability of children to communicate

Federal/provincial/territorial governments have identified other indicators that jurisdictions may choose to report. Manitoba is reporting on these optional indicators of children's well-being:

1. Safety and security: injuries among children
2. Community related indicators: neighbourhood satisfaction, safety and cohesion
3. Family-related indicators: parents' education, income, health and family functioning

New Information

"Who am I" scores and number knowledge:

- "Who am I" scores reflect a child's copying skills and writing tasks.
- The Number Knowledge Test assesses children's intuitive knowledge of whole numbers.

About the National Longitudinal Survey of Children and Youth (NLSCY)

The NLSCY was initiated in 1992 to look at the well-being of children and their families. It provides information on the characteristics and life experiences

of children and youth as they grow from infancy to adulthood, across Canada (Human Resources Development Canada and Statistics Canada, 1996).

Every two years, the NLSCY collects comprehensive data on children's individual, family, preschool, school and community characteristics and experiences and their physical, social, emotional, cognitive, language, academic and behavioural outcomes. Parents, teachers and principals are surveyed as well as children aged 10 and older. The families of approximately 23,000 Canadian children who were under 12 years old in 1994/95 participate in the NLSCY every two years. The survey will continue until the youngest children reach the age of 25 years in 2018.

The information collected in the NLSCY is fairly representative of the Canadian population. However, "the NLSCY does not include Aboriginal children living on reserves or children living in institutions and immigrant children are under-represented...Efforts are being made to address these issues, in particular the underrepresentation of immigrant and Aboriginal children." (Brink & McKellar, 2000., p. 113).

Results from the first cycle of the NLSCY can be found in *Vulnerable children: Canada's National Longitudinal Survey of Children and Youth* (Willms, 2002).

Demographics (1998/99, 2000/01 and 2002/03)

There were approximately 80,000 children, aged zero to five years, in Manitoba in 2002/03, representing four per cent of all children in Canada.

- The number of children has decreased from 1998/99 to 2002/03 in both Manitoba and Canada.
- There are more older children than younger children, signifying a decrease in the birth rate in Manitoba and Canada.

Number of Children by Age: 1998/99, 2000/01 and 2002/03

Birth Outcomes, 1998/99, 2000/01 and 2002/03

About 12,000 babies are born every year in Manitoba. In 2002:

- Most babies were born “on time” (93 per cent) with a healthy birth weight (78 per cent), but some babies were born at-risk, and some died before their first birthday.
- Infant mortality is a concern in Manitoba, with 7.1 infant deaths per 1,000 live births, while the Canadian rate is 5.4 deaths per 1,000 births. This has remained fairly stable in the five years from 1998 to 2002.
- Tobacco use during pregnancy has decreased in both Manitoba and Canada, with 17.5 per cent of pregnant women smoking in Manitoba compared to 15.9 per cent in Canada.
- In Manitoba 17 per cent of babies had high birth weights, putting them at risk for problems like diabetes, compared to 13 per cent of babies across Canada.
- A much smaller proportion of babies in both Manitoba and Canada had low birth weight (5.1 per cent in Manitoba and 5.8 per cent in Canada).

The following tables and charts give more details on the birth outcomes.

Preterm Births Rate¹: Percentage of live births with gestational age less than 37 weeks

Jurisdiction	2000			2001			2002		
	Male	Female	Total	Male	Female	Total	Male	Female	Total
Manitoba	8.6	7.3	8.0	8.4	7.1	7.8	8.1	6.8	7.4
Canada	8.0	7.0	7.5	7.7	6.9	7.3	7.9	7.0	7.5

Source: Canadian Vital Statistics - Birth Database

¹ Preterm birth rate is defined as the percentage of live births with a gestational age of less than 37 completed weeks (less than 259 days) at the time of birth.

Infant Mortality Rate (per 1,000 Live Births)^{1,2}

Jurisdiction	1998			1999			2000			2001			2002

Manitoba	7.5	5.9	6.7	9.7	7.0	8.4	6.9	6.1	6.5	9.1	4.8	7.0	7.8	6.3	7.1
Canada	5.7	4.8	5.3	5.7	4.8	5.3	5.9	4.7	5.3	5.8	4.6	5.2	5.8	4.9	5.4

Source: Statistics Canada, Canadian Vital Statistics, Birth and Death Databases and Demography Division (population estimates).

¹ Infant mortality rate is defined as the number of infants who die in the first year of life per 1,000 live births. Death refers to the permanent disappearance of all evidence at any time after live birth has taken place. Stillbirths are excluded.

² The mortality rate calculation uses live births in the calendar year.

Tobacco Use During Pregnancy¹

Immunization, 2000 to 2003

Manitoba does well in preventing diseases by immunizing its youngest children.

In 2002 and 2003, in Manitoba, there were:

- two new cases of Haemophilus Influenza b (Hib)²
- no new cases of measles
- no new cases of meningococcal disease

Reported Incidence for three Vaccine Preventable Diseases: Count and Rates⁴ (per 100,000)

Jurisdiction	Disease ¹	1998		1999		2000		2001		2002		2003

Source: Immunization and Respiratory Infections Division, Centre for Infectious Disease Prevention and Control, Public Health Agency of Canada

¹ For Measles and Meningococcal Group C Disease, rates include children 0 to 5 years of age;

For Hib, rates include children 0 to 4 years of age; and

Data for Measles, Meningococcal Group C Disease and Hib for 2002 and 2003 are provisional and subject to change.

² Hib : Haemophilus Influenzae type b disease (Hib data are based on confirmed cases reported through the NDSS (Notifiable Diseases Surveillance System))

³ Invasive meningococcal disease (IMD) serogroup C incidence rate

⁴ The rate is the number of new cases reported by year for children 5 years of age and younger, per 100,000 children in that age group.

Breastfeeding

Most mothers in Manitoba breastfeed their infants. In Manitoba during 2002/03:

- 87 per cent of children were breastfed by their mothers
- 33 per cent of mothers breastfed for 12 weeks or less
- 37 per cent of mothers breastfed for 3 to 6 months
- 30 per cent of mothers breastfed for seven months or longer

Prevalence of Breastfeeding¹ 1998/99, 2000/01 and 2002/03

Early Childhood Injuries, 1999 to 2003

From 1999 to 2003, many of Manitoba's young children had to go to the hospital because of:

- motor vehicle accidents
- fires
- falls and other accidents
- being assaulted by others (and sometimes from physically harming themselves)

Some of these injuries were fatal.

Note: Injury Mortality information was not available for this report.

Early Development Outcomes, 1998/99, 2000/01 and 2002/03

The National Longitudinal Survey of Children and Youth indicates that in 2002/03, the majority of Manitoba's 80,000 young children under age six (from 79 per cent to 93 per cent) were doing well in motor and social development, language development, and other social, emotional and behavioural outcomes during the first five years of life. These rates were similar to children across Canada.

However, it is important that we do not forget the Manitoba children who were vulnerable in 2002/03. Children were struggling in each of these areas of early development:

- 13 per cent (6,700 children up to three years of age) with delayed motor and social development
- 13 per cent (6,600 children up to three years of age) with low levels of personal-social behaviour
- 17 per cent (8,800 children ages two to five years) with emotional and anxiety problems
- 7 per cent (3,400 children ages two to five years) with hyperactivity and attention problems
- 17 per cent (8,600 children ages two to five years) with physical aggression and conduct problems
- 15 per cent (3,600 children ages four to five years) with delayed language development
- 15 per cent (3,600 children ages four to five years) with delayed copying and writing skills (in 2000/01)
- 21 per cent (4,900 children ages four to five years) with delayed number knowledge

Many of these children have multiple behaviour or learning problems and could have benefited from early support for learning and development. Vulnerable children can be found in every community and every kind of family in Manitoba and Canada.

Motor and Social Development (MSD)¹

Jurisdiction	Category	1998/99		2000/01		2002/03

		Count	Per cent	Count	Per cent
Manitoba	Delayed Number Knowledge	3,500	13.5	4,900	21.3
	Average Number Knowledge	18,900	73.0	15,500	67.4
	Advanced Number Knowledge	3,500	13.5	2,600	11.3
Canada	Delayed Number Knowledge	95,100	14.7	98,400	15.8
	Average Number Knowledge	458,700	71.0	453,700	72.7
	Advanced Number Knowledge	92,600	14.3	72,400	11.6

Source: NLSCY, Cycle 4 (2000/01, v2) and Cycle 5 (2002/03), Master Files, Parents Questionnaire; data presented is weighted; data based on provinces only.

¹ The Number Knowledge Test measures children's intuitive knowledge of numbers by assessing their understanding of the system of whole numbers. Results are based on a standardized score for Number Knowledge for children ages 4-5.

Children 4-5 years old with delayed development

* "Marginal" data quality; while this estimate meets Statistics Canada's quality standards, there is a high level of error associated with it.

Family Characteristics, 1998/99, 2000/01 and 2002/03

Parenting, parents' well-being and family socio-economics play important roles in children's well-being. Most children live in supportive, functioning families with positive parental interaction. Most parents read to their children every day. A significant number of families (12 per cent) had at least one parent who suffers from symptoms of depression. In 2002/03:

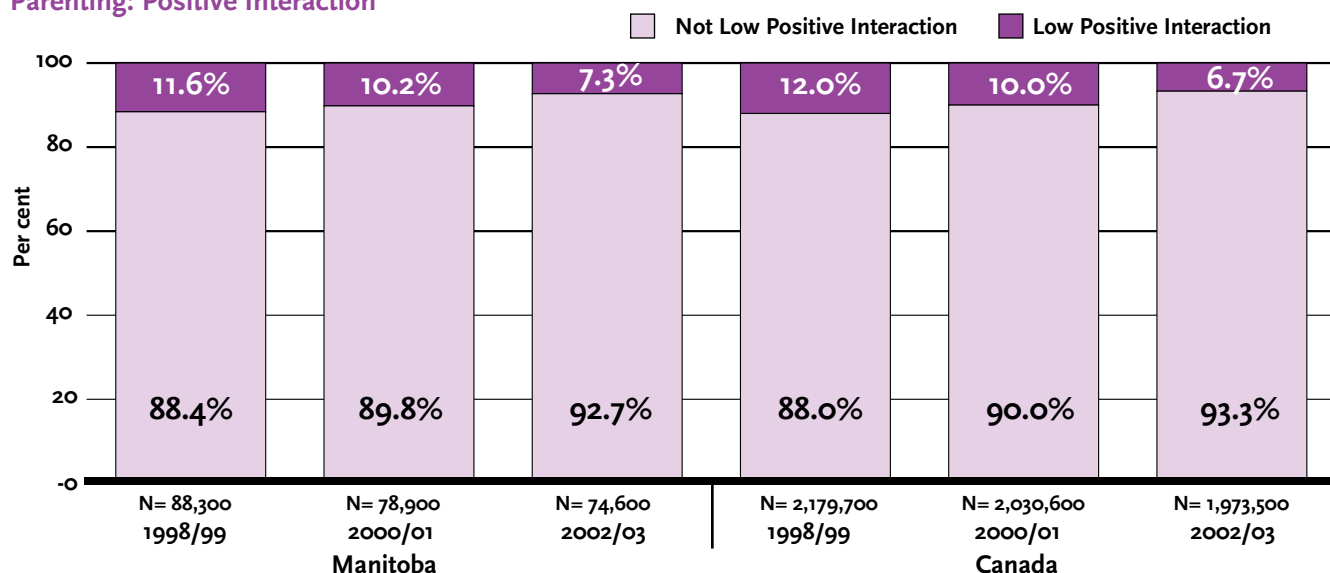

- 10 per cent (7,200 children) were living in a family with significant problems (ex: family members are not supportive or involved)
- 93 per cent (69,200 children) lived in families with positive parental interaction
- 73 per cent (56,100 children) of parents read to their children many times a day
- 12.8 per cent of mothers and 14.5 per cent of fathers had less than secondary school education, while 44 per cent of mothers and 46 per cent of fathers had a degree
- in 2003, 21 per cent (16,000 families) of Manitoba families with young children were living in poverty (based on the low income cut-off after taxes)

Neighbourhood Characteristics, 1998/99, 2000/01 and 2002/03

Neighbourhood safety and cohesiveness was good for most families with young children. However, some families live in unsafe neighbourhoods and/or neighbourhoods with low cohesiveness.

In 2002/03:

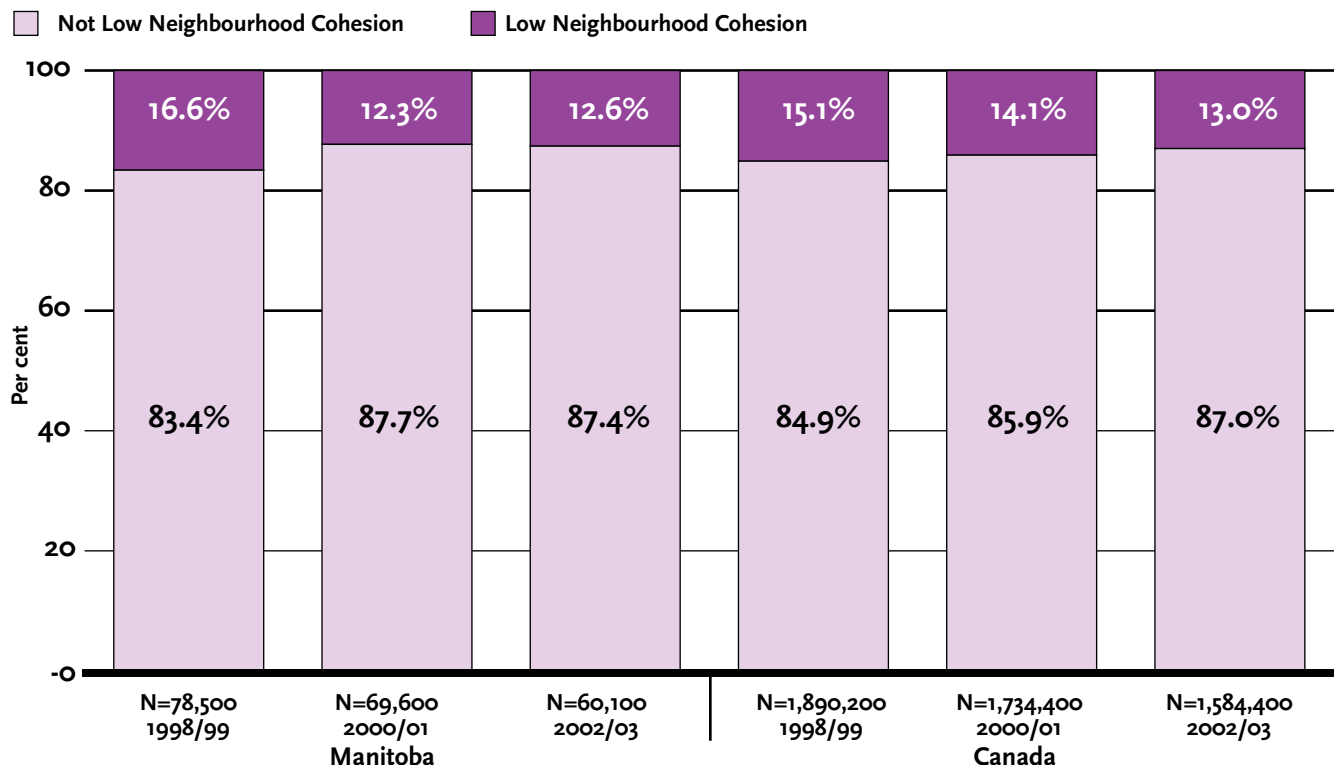

- 23 per cent of Manitoban families lived in unsafe neighbourhoods, an increase of 3 per cent from 2000/01
- Nearly 13 per cent of Manitoban families with young children lived in neighbourhoods with low cohesion (neighbours are not helpful) in 2002/03, which is nearly the same as 2000/01.
