Bed

Description

A: gravel; poorly-sorted with 80–90% clasts that are 67.9% calcareous and granule to small-cobble sized yet small pebble dominant; matrix is medium to very coarse sand; gravel beds are 0.8–1.0 m thick, and have textural gradations that dip 18° to 232° and 26° to 210°.

B: operator described taking out about 19 m of 'clean sand'; spoil pile from base contains quartz-rich medium-grained sand with an unknown low percentage of clasts that are 60–70% calcareous and 30–40% chert, pink granite, gabbro and volcanic clasts.
