

Dust Control for Settlements	Policy	PW4
	Effective Date	April 2002
	Revision Date	January 2019
	Page Number	1 of 1

What is the policy?

This policy applies to settlements only as the funding formula provides for dust abatement to Local Government Services Program funded communities.

The department, depending on resources and based on need, will attempt to co-ordinate the delivery of dust abatement (dust control) to settlements every second year. All roads within a settlement boundary will not necessarily be treated with dust abatement. Where a settlement considers dust abatement an annual program, it may provide dust abatement annually and pay the invoices for the year not covered by the department program.

Community responsibilities

- The settlement should ensure a dust control plan is implemented at least every second year.

Department responsibilities

- The department can provide assistance to co-ordinate the delivery of the program with a government agency or contractor and the settlement, as the case may be.
