

1.0 Introduction

Horizon Colony Farms Ltd. was incorporated on March 17, 2008. It established livestock operations within three existing hog production facilities (Figure 1) comprising a farrowing operation, and two finisher operations (Table 1) with a production capacity at the time of acquisition of 960 animal units. Since then, it has established a turkey production operation with 270 animal units. Horizon Colony Farms is seeking to expand its turkey production facilities to accommodate a maximum of 90,000 birds (900 animal units). Allowing for an additional 10 percent over the next 10 years, it is therefore applying for the conditional use of 99,000 birds (990 animal units) It is also seeking to add broiler chicken production facilities for a maximum of 60,000 birds (300 animal units) in the future too. Allowing for an additional 10 percent over the next 10 years, it is therefore applying for conditional use on the basis of 66,000 birds (330 animal units). Horizon Colony Farms is in the process of constructing new barns for producing both turkeys and broiler chickens and has applied for conditional use of these barns to the RPGA Planning District (Appendix B.4).
