

WORKSAFELY MHCA

Severity +		Probability +		Frequency +		=	Total	= Critical Rating
1	Fatality of permanent total loss disability	1	Likely to occur immediately	1	> 75% of day	→	3-4	1
2	Loss time injury	2	Probable in time	2	50% - 75% of day		5-6	2
3	Reportable injury, no loss time	3	Possible in time	3	25% - 50% of day		7-8	3
4	Minor medical treatment	4	Remotely possible	4	< 25% of day		9-10	4
							11-12	5

To calculate a rating:

Severity rating + Probability rating + Frequency rating = Total hazard rating = Critical rating

Example:

A Severity rating of 1
 A Probability rating of 3
 A Frequency rating of 2

A Total hazard rating of 6 would be a critical rating of 2

Apply this Critical rating into the box titled 'Hazard' with the name of the hazard
