

PTH 12 / PR 210 INTERSECTION IMPROVEMENTS FUNCTIONAL DESIGN STUDY

BACKGROUND INFORMATION

Manitoba Transportation and Infrastructure (MTI) is doing a functional design study of the PTH 12 and PR 210 intersection.

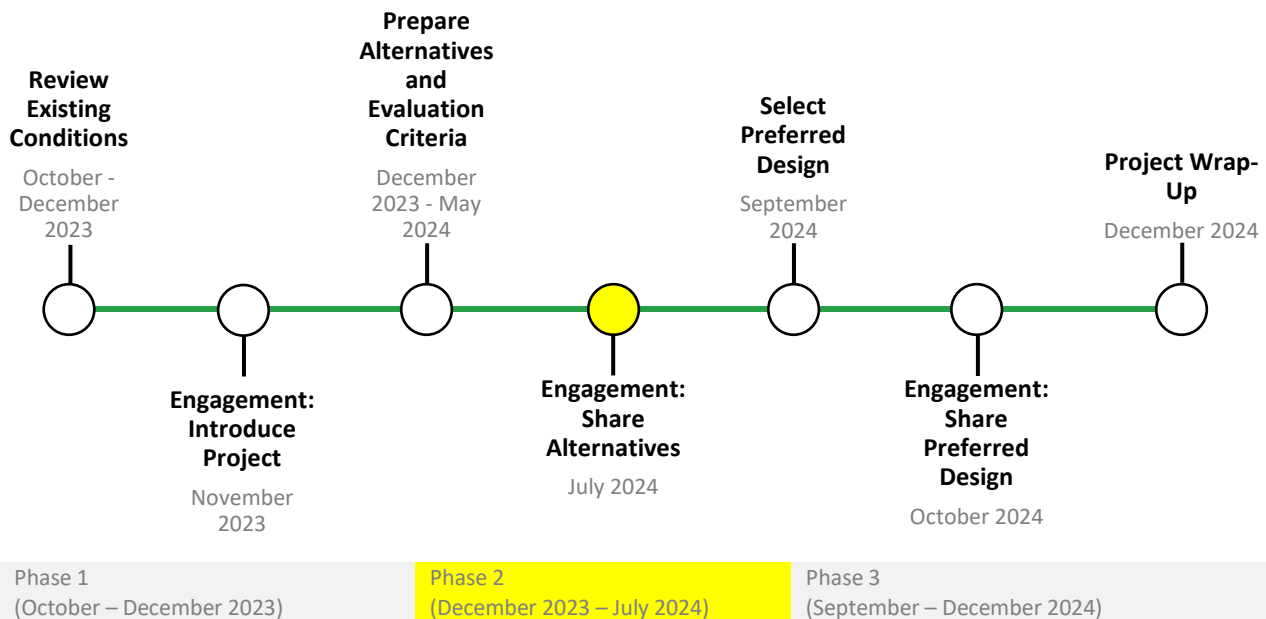

Functional design is an early phase of a design process. Concept plans are developed to address traffic operations and safety issues, and then evaluated and refined.

The project began in Summer 2023. Project goals and timelines were shared at initial stakeholder meetings. Key discussion themes included intersection options, such as lights, roundabouts, turn lanes, and priorities for safety and traffic flow.

PROJECT PROCESS

We look forward to sharing the design alternatives with public and stakeholders in Summer 2024.
